

**No.**        3249        03/27/2015        released 03/27/2015        **improvement**

**Tree-Frame (Filetransfer and MY-Profile): migrated files identified with special icons**

**No.**        3238        02/23/2015        released 02/23/2015        **improvement**

**User-Toolbar: define icons to switch to external programs or to start your own edt procedures**

**No.**        3228        11/26/2014        released 12/04/2014        **improvement**

**openFT: EDT command as local success and failure procedure**

**No.**        3227        11/26/2014        released 12/04/2014        **improvement**

**Syntax-highlighting of Assembler and Cobol compiler listings**

**No.**        3221        10/29/2014        released 10/29/2014        **improvement**

**WINGEN: Usage of integer variables in coordinates**

Specifying coordinates (x,y,w,h) of @wingen controls offer the following options up to now:

number, label, label+n, label-n, label/L, label/R, label/T, label/B

NEW:

#Inn, label+#Inn, label-#Inn

label/W (width of object)

label/H (height of object)

additional to calculate operations + and -

now also / (division) and \* (multiplication) are available

Dadurch wird das Handling vereinfacht und die Erstellung von Wingen-Dialogfenstern dynamischer.

**No.**        3220        10/29/2014        released 10/29/2014        **improvement**

**Automatism of new standard procedures when starting EDTW**

when starting EDTW searches for the following procedures to process automatically:

command procedure: EDTINITCMD in load-directory

command procedure: EDTINITCMD in AppData-directory

input procedure : EDTINIT in load-directory

input procedure : EDTINIT in AppData-directory

given program start parameter -c file

given program start parameter -i file

Error message "record no. 1 is too long" with a profile, that contains the option "Mode = binary"

---

<b>No.</b>	2588	12/05/2008	released 12/18/2008	<b>improvement</b>
------------	------	------------	---------------------	--------------------

**command write: keep file attributes (in particular SAMBA file system)**

Command WRITE don't overwrite directly a file. The new file is written to a temporary file, after it the original file will be deleted and the tempfile will be renamed as the original filename. In so doing the file attributes are lost.

With the new option in menu options / settings / protection this procedure can be changed to "write without temp file"

---

<b>No.</b>	2576	11/24/2008	released 11/27/2008	<b>error</b>
------------	------	------------	---------------------	--------------

**command FILE ignored if zip-file in workarea**

---

<b>No.</b>	2567	11/18/2008	released 11/27/2008	<b>error</b>
------------	------	------------	---------------------	--------------
