

No. 3292 02/12/2016 released 02/12/2016 **improvement**

EVENTSCAN: new substitution strings for processing action

Additional substitution strings for processing actions are available:
 !MSG-STR: Contains console message, but apostrophes are doubled, to pass value as a string to procedures
 !MSG-INS1, !MSG-INS2, ..., !MSG-INS9: Contains the text of the corresponding message insert (without apostrophes). If the given insert doesn't exist, an empty string is returned

Example:

```
!MSG      : SAT2200 ALARM 'AA' TRIGGERED OFF FOR EVENT 'EE' AND USER 'BB'
!MSG-STR  : SAT2200 ALARM ''AA'' TRIGGERED OFF FOR EVENT ''EE'' AND USER
''BB''
!MSG-INS1 : AA
!MSG-INS2 : EE
!MSG-INS3 : BB
!MSG-INS4 :
```

URLSERVER: WRONG GROUP message when using AUTHFILE

Group-Authorsation doesn't work correctly

No. 2702 09/04/2009 released 09/04/2009 **error**

URLServer: PDF layout definition doesn't work when using subtasks

No. 2666 06/08/2009 released 06/08/2009 **error**

URLServer: function XVIEW with TRANS=Y show wrong record structure

function XVIEW with operand TRANS=Y should add X'0D0A' at the end of each record, to show identical record structure in an external program; X'0D0A' was only added when operand REC=DOS was specified.

No. 2621 02/27/2009 released 02/27/2009 **improvement**

URLServer: SDF-P is not available in subtasks

SDF-P is not available in subtask processing (i.e. CGI), because the subtask procedure was started with /ENTER command. Now the subtasks are started as S-Procedures with the /ENTER-PROC command.
